Full debugging mode and integration

First main issue is trying to run a commonjs node project with ESM lucid-cardano.

I got the dynamic load hack but even then, I still get the package path not exported error.

I shouldn't touch lucid-cardano. So it's the way I'm using it with my project that is the problem

<https://github.com/spacebudz/lucid/issues/186>

This worked...

But that is now changing the way the project is set up and I'll need to change a lot of other things.

....

It's not too bad. Just adding .js and disambiguating folder imports.

Added some config and...
